

Suggestions for Viewing Slides in Flash Format

(Please note: Some slides may require multiple clicks to view all content.)

PowerPoint slides posted to The Health Risks of Extraterrestrial Environments [THREE](#) site have been converted to the Shockwave Flash (SWF) file format that may be viewed using the Adobe Flash player.

The PowerPoint slides have been converted to Flash format using the ISpring Pro software, which offers viewers the opportunity to view slides and slide thumbnails, slide notes (if available), and to search for words or phrases in the slides, slide notes, or slide titles. Additional information about the presenter, such as a personal web page, may also be displayed.

After clicking on the link to the slides, use the navigation buttons on the left of the page to select slide thumbnails or notes. Use the magnifying glass icon to select search items. Type in the words to search for and hit the right-facing arrow. Numbers of the slides that contain the search terms will be displayed. You may jump to those slides by clicking on the numbers.

The navigation button on the right side of the screen increases or decreases the size of the slides. When the size of the slides is increased, the left navigation pane closes, but it will reopen when the slide size is again decreased.

Click on the More info tab for the presenter's email address or personal web page.

Close the Window to return to The Health Risks of Extraterrestrial Environments main page.
